Of these, 6 customers have written no texts or given their feedback in another language. 2 3 Customers 3 customers have given this product a 2 star rating. I am a drummer and have the DB90 attached to my hi-hat stand. The audible beep and ability to change voice is excellent and if needed there is a handy headphone socket if the click only needs to be heard by you. I'm trying to master some new material at the moment and the voice count is extremely helpful. The unit can stand up on its own but using the tap facility is more difficult to use. The display is excellent and clear and it's useful to have the moving metronome graphic to really help nail the time. Saving tempos is simple and after a short while you get used to the layout and move around at a breeze. Yes it is a premium price but it is also a brilliant premium product. Highly recommend and with the fantastic service from Thomann, you can't go wrong. Send report Total features handling quality Industry standard Bob C., 19.06.2019 Difficult to fault. There's a Rhythm Coach function with an onboard mic, a reference tone function for tuning, an Instrument input, MIDI input, and other handy tools to make learning fun and effective. Dedicated sliders, buttons, rotary dial, and large backlit LCD for userfriendly operation. Practice with the Rhythm Coach by connecting a VPad optional. Frontpanel sliders, buttons, and a large rotary dial provide instant, hands-on access to edit parameters. Select four different click sounds, including a human voice counting sound that will help you know your place in the bar. The DB90 is also equipped with realistic PCM drum patterns, for developing your accuracy and rhythmic feel effectively. Guitarist and bassist can directly plug into the DB90 without any other gear required, and monitor via connected headphones — practically any type of instrumentalist can benefit from the DB90's features. And for those who wish to sync to an external sequencer for more elaborate accompaniment, they can do so with the DB90's MIDI input. This stage-oriented feature is especially useful for drummers. This innovative follow-along feature has four training modes to help build your accuracy, speed, and endurance.

With the DB90's onboard microphone, you can use the Rhythm Coach functions with acoustic drums, or plug a Roland VPad into the Trigger input. Play along, and chart your progress. The new DB90 is loaded with quality sounds and drum patterns to make your practice sessions less mundane and more musical. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. 3rd Day Believer 3.0 out of 5 stars Metronome is LOUD, which was my main want. That shouldnt be hard to find, but is. It has the option of TOCK sound and HUMAN VOICE sorry for the caps, but this is what people are searching for, even if you go to the online forums. The problem with many metronomes, is they sound two different tones, like C and G, and by God I hear C and G, which is most distracting. I want dead, nonmusical sounds. The DB90 has these. So great. The bad news BUILD QUALITY IS ABYSMAL. I mean really, the housing is tackier than any toy, and the little foldout stand in the back feels like itll snap in a light breeze. This is not even remotely the build we expect in an implement of this kind. The cheapest guitar tuner has a better housing than this. If you drop this on a hardwood floor twice, I bet it just dies.

Finally, I already have a Boss adapter, and—given the many, many comments on how many batteries this eats even the maker says it works for only a few hours per battery—the adapter is a must. Just astonishingly crummy, given that this is the “The most advanced metronome available.” I owned this same model of Dr Beat for around a decade beginning in 2002 and had no problems. I practiced with it constantly and even dropped it several times with no issues. When I lost it on a plane I hesitated to buy another one of these metronomes because of the cost there are other brands now for much less that include all the functions I need. But, years later, I took the plunge. I was a little wary of how flimsy the stand was, and I just kept it on my desk to practice with at home because its too heavy to lug around. One day the stand popped out while I was using it, and the metronome no longer turns on, just emits a fuzzy sound while the battery is plugged in. Tried changing the battery to no avail. Emailing BOSS for support and hope they come through. Anyway, this is WAY too fragile of a product for something that people need to be able to futz with and press buttons on regularly. This thing smokes those apps in versatility. I really like how I can now mix in the triplets at the volume I need and i also love all the jack in and outputs one could imagine needing. The only reason I gave it 4 stars is because the speaker could use an upgrade and the if I run audio through it the sound is significantly worse. Boss, please update the technology and this product will be absolutely perfect. The speaker is louder than every metronome I've used. Cons using the headphones there is a lot of noise. I used it as an insert on my behringer board and no matter what power source, patch cable or direct headphones, the unit is noisy. It's not noticeable with the onboard speaker but it's a lot when using it plugged in. Plus the metronome voices sound horrible when plugged in.

I use a Roland TD50 VDrum brain and route it's onboard click to a direct out port in back then insert it into my board. Very expensive metronome that could have better sounds. I have gone thru at least 9 different metronomes in the past 10 years. The KLIQ was nice until it lost its mind before the year was up. I own a few Korg TM50 units and they are real good, but they are a little too quite for my purpose pipe organs are loud. This is the first time I have tried any of the Boss metronomes and was very immediately impressed with the functionality of it. If there was a higher grading than 5 I would have given this more than five stars. What I like about the Boss DB60 Ease of use. I love the actual sound, it is more of a old wooden tock instead of a digital ping. I can instantly add or change half beats or third beats on the fly and give them different volumes. There is nothing to like about this DB60, and if and when it breaks I am very hard on equipment I will buy another Boss DB60. I have finally found a metronome I really like after 50 years in the business. Neither the seller nor Amazon will do anything to help me with the exception of referring me to the manufacturer. Very bad business not to stand behind your product. Do not order!!! It seems like a lot of the features would be most useful for drum practice, but the basic features are useful for practicing any instrument. Also,

the more complex features approach those of a drum machine, so you can use it to simulate playing to a more realistic drumbeat. See the usersupplied images for how to add the optional footswitches. They make it very easy to turn the the unit on and off, and cycle through presets that you have programmed in. You can get an English version from Bosss website. However, in any language it is pretty brief. For a unit this complex, longer instructions with some examples would help users get more out of it. Note I have not done a web search; there may be tips available in forums, blogs, etc.

Most pianists tend to prefer the classic wooden windup variety, and having listened to the sounds that are produced by most of the cheaper electronic metronomes out there, I can understand why. Instead of producing cheapsounding digital beeps, the DB90 actually plays back recorded samples of a traditional wooden metronome. The traditional metronome pendulum is also simulated on the LCD screen via a series of lines that give the illusion of a moving pendulum, whilst two red LEDs just above the screen flash in time with the beat. In spite of looking quite complicated, the DB90 is actually very easy to operate. Now you can have some fun with the sliders. The first slider controls the volume of the bell; the second slider controls the volume of the beat; and the next three sliders allow you to sound eighthnotes, sixteenthnotes and triplets. Youll probably not want to use these very much, but theyre there if you ever need them. The last slider is the overall volume control. This metronome has plenty of volume to it, so if youre playing a digital piano, youll probably be only using 30% volume. The backlight will now remain on until you switch the unit off. You can do this any time you like without worrying about losing your rhythm settings, because everything is saved to memory automatically. In terms of connectivity, the BD90 has it all. There are also some input sockets, including a MIDIin, although this probably goes beyond what most people will actually use. Once youve started using this metronome as part of your daily music practice, youll probably want to buy a power supply for it, because it chews through batteries quite quickly. Only three small negatives 1 Roland wired this metronome to switch seamlessly to using battery power in the event of a cable disconnection or a power failure.

Whilst I can understand why they have done this, it also means that if you connect your DB90 to an external power supply, and then you forget to turn your power supply on, the unit will continue to operate normally, but using battery power instead. This feature might result in you going through more batteries than you intended. 2 The metronome has 50 user memories so that you can save and recall your favourite rhythms. However, when you change the battery, all your user memories get reset, and there is no way of backing up your data. 3 The pullout plastic stand at the back of the unit feels a bit flimsy. When deciding which metronome is right for you, certain challenging questions will need to be asked. Is it really worth paying 105 for a complicatedlooking digital metronome that requires its own separate power supply when you can buy a traditional woodeffect windup one complete with bell for under 30 I wrestled with this dilemma myself, and I chose to go digital. Your choice might be different to mine, but the most important thing is to buy a metronome that you can live with, and which makes your daily music practice a more enjoyable experience. Sorry, we failed to record your vote. Please try again Very handy when it all seems too busy. Cons Far too extensive but it is a large format and I know of no other large format metronomes. The inbuilt stand to angle the unit at 70 degrees from the desk is appallingly flimsy and will collapse as soon as you go near the buttons. I am personally going to design and 3D print a better solution but not everyone has that luxury. Would I buy it again in hindsight Yes. There is no alternative for a larger format machine with a lot of features including MIDI sync etc. Sorry, we failed to record your vote. Please try again The missus rejected it as a present due to its limitations, so she kept the one she had on permanent loan from me and I ended up with this boss one. Its fine for me but not for my OH.

The build quality is not as good as boss pedals and it has no in built stand but its fine for me. Sorry, we failed to record your vote. Please try again The backlight makes the screen a lot easier to read when setting. Sorry, we failed to record your vote. Please try again The battery lasts 6 hrs. Pointless.

So please be aware, you need to order the power cable separately. Personally, I'm not impressed! Sorry, we failed to record your vote. Please try again Can't be beaten. For playing guitar this is terrific. Very versatile and with the ability to use ear plugs is fantastic for looping. Let's face it. Metronomes are for practice. This is everything you would need. Sorry, we failed to record your vote. Please try again Very helpful. Sorry, we failed to record your vote. Please try again I like so much its natural metronome sound, its jog dial. Do not use battery but plug charger but agree the battery runs out very quickly. Only complaint is after it is unplugged and then plugged back or if electricity goes away, when powered back on, the meters have to be moved up or down otherwise they sound at top level even though they are at the lowest. I kept the stars at 5 because I believe these little faults are not enough to wipe one. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Everyone has commented and said its a perfect piece of kit. The only downside for me is that you can only store 8 tempos. For set lists longer than 8 tracks it becomes tricky to navigate and get to the right tempo in time. Sorry, we failed to record your vote. Please try again Really handy. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again.

Questions Call The Boss DB90s note mixing function allows you to instantly create a variety of beats by adjusting the levels of 5 different note values. Frontpanel sliders, buttons, and a large rotary dial provide instant, hands-on access to edit parameters. Select 4 different click sounds, plus a human voice counting sound that will help you know your place in the bar. The DB90 is also equipped with realistic PCM drum patterns, for developing your accuracy and rhythmic feel effectively. Plug Into Rhythm Coach Rhythm coach has 4 training modes to help build your accuracy, speed, and endurance. With the Boss DB90s microphone, you can use the Rhythm Coach functions with acoustic drums or plug a Roland VPad into the trigger input. Play along and chart your progress. Many Uses Drummers can connect to the DB90 Dr. Beat Metronome via Roland VPads or the internal microphone. Guitarists and bassists can directly plug into the DB90 without any other gear required and monitor via connected headphones. And for those who wish to sync to an external sequencer for more elaborate accompaniment, they can do so with the DB90 metronomes MIDI input. This stage-oriented feature of the Boss Dr. Beat Metronome is especially useful for drummers. All Rights Reserved. Publisher does not accept liability for incorrect spelling, printing errors including prices, incorrect manufacturers specifications or changes, or grammatical inaccuracies in any product included in the Musicians Friend catalog or website. Prices subject to change without notice. So I have to rule them out and now dig a bit deeper into DB60 and DB90. What I need is rhythm programming. I downloaded their manuals to see if they do what I want.

But the manuals aren't really helpful. But later the manuals talk about clave rhythm as a separate thing. Very confusing. DB60 manual says volumes can be set at 3 different levels. So, including muting, are there actually 4 levels It seems volumes can only be changed in Beats, not in Rhythms Can I program it to do a simple rhythm like this Thanks. Very confusing. Now count 12123, 12123 in the same fashion. Both are in 5, but with a different feel. For example a 32 Rumba Clave For a 23 Clave, you would simply reverse the bars. So, including muting, are there actually 4 levels To accurately program the rhythm you posted, you really need a drum machine. How do you program a 32 rumba clave on the DB60. The manual is not very helpful. The new DB90 is loaded with quality sounds and drum patterns to make your practice sessions less mundane and more musical. To play the media you will need to either update your browser to a recent version or update your Flash plugin. You will not be charged until your item ships. Features The most advanced metronome

Guitarist and bassist can directly plug into the DB90 without any other gear required, and monitor via connected headphones — practically any type of instrumentalist can benefit from the DB90's features. And for those who wish to sync to an external sequencer for more elaborate accompaniment, they can do so with the DB90's MIDI input. This stageoriented feature is especially useful for drummers. Mostly I would like to send a shout out to Scott in the drum department at the Cincinnati location. He was very helpful in getting me everything I needed to get my new drum studio up and running. I will always check with him first when I need new gear. Thank you Scott and Sam Ash for being there when I needed you. With great versatility with different time signatures, variable tempo and variable volume level, the DB90 is the metronome used by Drum Corps International corps. Also used by high school, college and professional musicians, the recognizable tone can be felt by musicians who've heard it before from miles away. This is the greatest metronome money can buy so don't miss out! To play the media you will need to either update your browser to a recent version or update your Flash plugin.
